pregnancy?

HIV Prevention + Pregnancy Planning Initiative

You can have a healthy, HIV-negative baby no matter your HIV status. Ask your health care provider about your options.

If you, your partner or both of you are living with HIV, medical providers can support you through healthy conception, pregnancy and delivery of an HIV-negative baby.

There are medications that can keep an HIV-negative partner negative, and keep the chances of passing HIV on to your baby less than 1%.

Talk to your provider about these options and start the discussion about how you can get pregnant and have a healthy, HIV-negative baby.
